

PROFESSIONAL SUMMARY

Java Developer with **2 years of experience** building secure, scalable backend systems using **Java, Spring Boot**, and **Microservices Architecture**. Delivered enterprise banking APIs and engineered an event-driven food delivery platform using **Kafka, Redis, Docker**, and **Oracle Cloud Infrastructure (OCI)**.

Specialized in designing **production-grade REST APIs, JWT-based authentication systems, asynchronous event processing, CI/CD automation**, and **cloud deployments**. Strong hands-on expertise in **distributed systems**, backend optimization, and scalable microservice communication patterns.

TECHNICAL SKILLS

- **Languages:** Java, C++
- **Backend:** Spring Boot, Spring MVC, Hibernate, REST APIs, Microservices
- **Security:** Spring Security, OAuth2, JWT (RS256), Role-Based Access Control
- **Distributed Systems:** Apache Kafka, Event-Driven Architecture, Asynchronous Processing, RabbitMQ
- **Caching:** Redis
- **Databases:** PostgreSQL, MySQL, Oracle SQL
- **Cloud & Infrastructure:** Oracle Cloud, Spring Cloud, API Gateway, Service Discovery (Eureka), Centralized Configuration.
- **DevOps & CI/CD:** GitLab CI/CD, Docker, Container Registry, Maven, SSH Deployment
- **Web Technologies:** JavaScript, React, HTML, CSS, Bootstrap

PROFESSIONAL EXPERIENCE

Software Engineer | Nucleus Software Exports Limited

Jan 2023 – Jan 2025

- Engineered secure **RESTful APIs** using Java, **Spring Boot**, and **Hibernate** to support enterprise banking workflows and improve service response performance.
- Implemented API security using **OAuth2 and JWT** authentication with **Spring Security**, enforcing secure access control for enterprise services.
- Optimized Oracle **SQL queries** and **improved database schema design** to improve transactional performance and reduce backend processing latency.
- Debugged production issues, Conducted **Root Cause Analysis (RCA)** and implemented engineering fixes that **reduced QCT issues by 20%** compared to the previous release.
- Developed **File Upload and Download** functionality for enterprise workflows, enabling efficient bulk data processing and reducing manual effort in handling business data.
- Performed backend API testing and validation to ensure reliable functionality, stable integrations, and reduced production defects.
- Collaborated with cross-functional teams in Agile sprint cycles and participated in defect tracking, code reviews, and delivery planning activities.
- Proposed engineering improvements that **reduced development effort by 15% in engineering hours**, accelerating feature delivery timelines.

PROJECTS

Tastio – Food Ordering Platform (Event-Driven Microservices Architecture)

Independent Engineering Project | 2026 – Present | Live Demo

Tech Stack: Java 17 | Spring Boot | Oracle Cloud | Kafka | Redis | Docker | PostgreSQL | GitLab CI/CD | React

- Architected a **distributed microservices backend** using Java, Spring Boot, and Spring Cloud with **8 independent services** (Api-Gateway, Eureka, User, Auth, Restaurant, Cart, Order, Payment).
- Designed and implemented automated **CI/CD pipelines** with **environment-specific configurations**, enabling **consistent, repeatable releases** and minimizing manual intervention in the **deployment lifecycle**.
- Deployed backend microservices on **Oracle Cloud Infrastructure (OCI)** virtual machines and **automated deployments** via **CI/CD** using **SSH-based execution**.

- Deployed frontend application on **Vercel** and integrated it with backend APIs hosted on OCI for seamless full-stack deployment.
- Containerized microservices using **Docker** for environment consistency and scalable deployment.
- Designed **event-driven architecture** using **Apache Kafka** to handle order lifecycle events, enabling asynchronous communication between services.
- Implemented **Redis-based caching** layer to optimize read-heavy operations, reducing database load and improving API response time across services.
- Secured APIs using **Spring Security with JWT authentication** (RS256, access + refresh tokens) and **role-based authorization**
- Implemented **API Gateway + Service Discovery (Eureka)** to enable centralized routing and dynamic service registration.
- Implemented **centralized configuration management** using **Spring Cloud Config** with a separate Git repository, enabling environment-based configuration and dynamic updates without service redeployment.
- Implemented **Razorpay payment gateway** integration with order-based transaction flow, ensuring secure payment processing and seamless integration with the microservices-driven order lifecycle.
- Integrated backend APIs with **React-based frontend (AI-assisted development)**.

EDUCATION

- **B.Tech. (Information Technology)** | Chameli Devi Group of Institutions, Indore, India | 2023
